ABSTRACT

The 1996 National Household Education Survey (NHES:96) was a random digit dial telephone survey of households that was developed by the National Center for Education Statistics and conducted by Westat, Inc. The NHES:96 included two topical survey components, "Parent and Family Involvement in Education," (PFI) which collected data about family involvement in children's schooling, and "Civic Involvement," (CI) which collected data about participation in civic activities and attitudes toward government. This manual provides documentation and guidance for users of the Household and Library public release data file of the NHES:96. It contains a description of the Household and Library data file and a discussion of data considerations and anomalies. The file contains data from all 55,708 completed screener and Household and Library interviews. There are 3 records for each interview, so that the file contains 167,124 records. Data items are listed in the file in the following order: (1) system variables; (2) household member variables; (3) public library use variables; (4) household characteristics; (5) household membership variables; (6) derived variables; (7) weighting and variance estimation variables; and (8) imputation flag variables. Included as four appendixes are the public file layout, the Statistical Analysis System code for creating derived variables, the codebook for the file, and directions and sample code for linking NHES:96 files. Volume II is meant to be read in conjunction with Volume I, which provides an overview of NHES:96 methodology. (SLD)

The National Center for Education Statistics (NCES) is the primary federal entity for collecting, analyzing, and reporting data related to education in the United States and other nations. It fulfills a congressional mandate to collect, collate, analyze, and report full and complete statistics on the condition of education in the United States; conduct and publish reports and specialized analyses of the meaning and significance of such statistics; assist state and local education agencies in improving their statistical systems; and review and report on education activities in foreign countries.

NCES activities are designed to address high priority education data needs; provide consistent, reliable, complete, and accurate indicators of education status and trends; and report timely, useful, and high quality data to the U.S. Department of Education, the Congress, the states, other education policymakers, practitioners, data users, and the general public.

We strive to make our products available in a variety of formats and in language that is appropriate to a variety of audiences. You, as our customer, are the best judge of our success in communicating information effectively. If you have any comments or suggestions about this or any other NCES product or report, we would like to hear from you. Please direct your comments to:

INTRODUCTION

The 1996 National Household Education Survey (NHES:96) was a random digit dial (RDD) telephone survey of household developed by the National Center for Education Statistics (NCES) and conducted by Westat, Inc. The NHES:96 included two topical survey components:

- Parent and Family Involvement in Education (PFI), in which data were collected about types and frequency of family involvement in children's schooling, school practices to involve and support families, and learning activities with children outside of school; and
- Civic Involvement (CI), which included sources of information about government and knowledge about government, community service participation, political participation, and attitudes related to democratic values and government.

There were three populations of interest for the NHES:96:

- Children 3 years old through grade 12, whose parents responded to PFI items, and childen in 6th through 12th grades, whose parents also responded to CI items;
- Students in grades 6 through 12, who, in addition to their parents, responded to CI items and to a small number of PFI items; and
- Adults, defined as persons 18 years old or older, not enrolled in grade 12 or below, and not on active duty in the military, whose responses to CI items provided estimates representative of all civilian U.S. adults.

In addition to the major topical components, the NHES:96 Screener collected demographic and educational information on all members in every household contacted, whether or not anyone in the household was selected for an extended interview. (The term "extended interview" refers to the interviews pertaining to the topical component of the study, that is, the Parent PFI/CI, the Youth CI, or the Adult CI interview.)

This manual, the *NHES:96 Household & Library Data File User's Manual, Volume II*, provides documentation and guidance for users of the Household & Library public release data file of the 1996 National Household Education Survey (NHES:96). This volume contains a description of the Household & Library data file and a discussion of data considerations and anomalies. Included as appendixes are the public file layout, SAS code for creating derived variables, the codebook for the Household & Library public data file, and directions and sample code for linking NHES:96 files.

Volume II is meant to be read in conjunction with the *NHES:96 Data File User's Manual, Volume I*. More information about the purpose of the study, the sample design, the other survey components, the data collection instruments, and data collection and data processing procedures is contained in the *NHES:96 Data File User's Manual, Volume I*. Information about the Parent and Family Involvement in Education and Civic Involvement (Parent PFI/CI) public data file, the Youth Civic

Involvement (Youth CI) public data file, and the Adult Civic Involvement (Adult CI) public data file can be found in Volumes III, IV, and V of this manual, respectively.

6. GUIDE TO THE DATA FILE AND CODEBOOK

6.1 Content and Organization of the Data File

This section describes the content of the Household & Library public release data file of the NHES:96. This file contains data from all 55,708 completed Screener/Household & Library interviews. There are three records for each interview completed, so the file contains 167,124 records. The file is organized so that logically related sets of variables are grouped together. The data items are listed in the file in the following order: system variables, household member summary variables, public library use variables, household characteristics, household membership variables, derived variables, weighting and variance estimation variables, and imputation flag variables.

A list of all the variables in the Household & Library data file is shown in appendix B. The VARIABLE NAME column displays the unique identifier for each variable in the data file. The VARIABLE LABEL column displays a short description associated with the variable. The FORMAT column indicates if a variable has a numeric ("N") or a character ("A") format. All of the variables in the Household & Library file except SCRNRSLT, SGRADE1 through SGRADE16, SGRDEQ1 through SGRDEQ16 and STATE have numeric formats. The LENGTH column indicates the length of the variable by the number of digits. The length descriptor also includes the number of digits found after the decimal point for noninteger numeric variables (e.g., weight variables). The position of the variable is indicated in the START and END columns which indicates the position in the file where the variable begins and ends.

A value of "-1" for any variable on the data file indicates that a case was part of a legitimate skip. For example, if a person was not enrolled in school, the followup item asking the specific grade or year of school (SGRADE(*n*)) would have a value of "-1" for that person, because the question was inapplicable. This convention of assigning -1 to all legitimate skips applies to all NHES data files.

The NHES:96 data files are provided on CD-ROM and are accessible through an Electronic CodeBook (ECB) that allows data users to view variable frequencies, tag variables for extraction, and create the SAS, SPSS for DOS, or SPSS for Windows code needed to create an extract file for analysis purposes. The ECB contains all of the NHES:96 data sets: the Household & Library file, the Parent PFI/CI file, the Youth CI file, and the Adult CI file. The ECB also contains all data sets for previous NHES collections and documentation for every file. Instructions for using the CD-ROM and ECB are provided in a separate document, the *National Household Education Survey: NHES:91/93/95/96 Electronic CodeBook (ECB) User's Guide* (Collins and Chandler forthcoming). The sections that follow describe the contents of the Household & Library data file.

6.1.1 System Variables

System variables are created during the conduct of an interview and are instrumental in the successful administration of the interview. Their creation is transparent to the interviewer and to the respondent. System variables fall into two categories: linking variables (record identifiers or ID numbers) and interview status variables. Linking variables are record identifiers that provide a link to other interviews completed in the same household. Status variables are set at the completion of each interview to define interview status.

BASEID is the eight-digit identifier for the household. This ID number also forms the first eight digits of interview ID numbers for other interviews in the household providing a means of linking interviews within the same household. See appendix E for instructions in linking the NHES:96 data files.

SCRNRSLT (Screener result) is the variable that holds the final completion code for the Household & Library interview.

The values for SCRNRSLT are:

C1 = No extended interview
C2 = Parent PFI/CI interview
C3 = Parent PFI/CI and Youth CI interviews
C4 = Adult CI interview

This completion code reflects the case's status at the end of the Screener according to whether household members were sampled for any extended interviews, by interview type. The extended interviews were not completed in all cases due to unit nonresponse at the extended interview level.

SCRNRESP is the variable that indicates who responded to the Screener. The value of SCRNRESP is the person's household-member person number that was assigned during the Screener enumeration. It will be equal to the value of PNUM(*n*) for the Screener respondent. (PNUM(*n*) is described below.)

LIBRESP is the variable that indicates who responded to the questions on public library use by household members. It is the person's household-member person number that was assigned during the Screener enumeration. LIBRESP will be equal to the value of PNUM(*n*) for the person who answered the public library use items. (PNUM(*n*) is described below)

ENGLSPAN is the variable that indicates whether the interview was conducted in English or in Spanish.

The values for ENGLSPAN are:

1 = Interview was conducted in English
2 = Interview was conducted in Spanish

6.1.2 Household Member Summary Variables

Household member summary variables are variables that reflect characteristics of the household members as a unit. For example, questions were asked about whether any member of the household was on active duty in the military, whether all household members were born in the United States, and so on. In the actual Screener administration, these items were interspersed with questions on individual household members to facilitate the flow of the interview. They are grouped together on the data file for ease of use.

6.1.3 Public Library Use Variables

The Public Library Use variables appear on the file in the same order as they were asked. Refer to the NHES:96 Screener/Household & Library interview in Volume I, appendix A for the questions and their order. Although the order of the Library items was the same for each interview, the place in which they were asked as a group varied. For households assigned to the adult portion of the sample and for households in the parent/youth portion of the sample that indicated that there were no members age 20 or younger, the Library items were asked before the household members were enumerated. For other households in the parent/youth portion of the sample, the Library items were asked after the household membership items, if no child or youth was eligible for sampling, and in the first Parent PFI/CI interview if a child or youth was sampled.

6.1.4 Household Characteristics Variables

Household characteristics variables are variables that reflect characteristics of the household as a unit. For example, questions were asked about whether the home was owned or rented and the type and size of community where the household was located. These household items appear on the file in the same order as they were asked. Household questions were asked in the Screener if no household member was sampled for an extended interview. Otherwise, some of the household questions were asked at the end of the first extended interview in the household. Refer to the questionnaire in Volume I, appendix A for the questions and their order.

6.1.5 Household Membership Variables

All household members were enumerated in the Screener. Data collected included each person's first name, age and sex (S6), educational status (SX7 through SX14), and demographic characteristics (SX15 through SX22 and SX27 through SX33OV). There is a repeating series of items in the household membership section of the data file. Variable names and labels reflect sequences for each person. Each of the questions about household membership characteristics was asked for every household member enumerated and ends with a number. For example, SEX1 refers to the first person in the household, SEX2 the second person, and so on.

The household member information is stored on the public release data file for each person in descending order by age. The variables appear on the data file as follows:

PNUM1 indicates the enumeration number of the oldest household member.

HHAGE1 indicates the age of the oldest household member.

HHSEX1 indicates the sex of the oldest household member.

SENROL1 indicates whether the oldest household member is enrolled in school.

SHOMSC1 is the home school status of the oldest household member if he/she is being home schooled.

SGRADE1 is the grade or year of school attended by the oldest household member if he/she is enrolled.

VOCYR1 is the year of vocational/technical school attended by the oldest household member if he/she is enrolled in vocational/technical school.

COLLYR1 is the class standing of the oldest household member if he/she is attending college.

GRADYR1 is the year of graduate or professional school of the oldest household member if he/she is attending that type of school.

SGRDEQ1 is the grade equivalent of the oldest household member if he/she is being home schooled or attending school with non-regular grades.

PUBSCH1 indicates whether the school attended by the oldest household member is a public or private school.

FULTIM1 indicates the full time/part time enrollment status of the oldest household member if he/she is enrolled in school.

GRADE1 indicates the highest grade or year of school completed by the oldest household member age 16 and older if he/she is not enrolled in grade/equivalent 12 or below.

SDIPL1 indicates whether the oldest household member has a high school diploma or its equivalent, such as a GED, if he/she indicated that his/her highest grade completed was less than a high school diploma.

MARITL1 is the marital status of the oldest household member (set to -1 for persons under age 16).

ACTVDU1 indicates the active military status of the oldest household member (set to -1 for persons under age 16).

BORNUS1 is the country in which the oldest household member was born if the respondent indicated that not everyone in the household was born in the 50 United States or the District of Columbia.

LANG1 is the first language the oldest household member learned to speak if the respondent indicated that not every household member learned English as their first language.

RACE1 indicates the race of the oldest household member.

OTHRAC1 indicates the oldest household member's race if "some other race" was reported at RACE1 (SX21).

HISPAN1 indicates whether the oldest household member is Hispanic.

PNUM(*n*), **HHAGE(*n*)**, **HHSEX(*n*)**, **SENROL(*n*)**, **SHOMSC(*n*)**, **SGRADE(*n*)**, **VOCY(*n*)**, **COLLYR(*n*)**, **GRADYR(*n*)**, **SGRDEQ(*n*)**, **PUBSCH(*n*)**, **FULTIM(*n*)**, **GRADE(*n*)**, **SDIPL(*n*)**, **MARITL(*n*)**, **BORNUS(*n*)**, **LANG(*n*)**, **RACE(*n*)**, **OTHRAC(*n*)**, and **HISPAN(*n*)** variables are then repeated for each other household member, in descending order of age, using sequential numbers. The maximum number of persons in any household is 16. Therefore, the maximum ending number for each of these variables is 16, e.g., AGE16.

6.1.6 Derived Variables

Derived variables were developed and included in the Household & Library public use data file to aid users in their analyses. The derived variables fall into three categories: questionnaire item variables, counter variables, and variables linked to other data sources. Questionnaire item-derived variables were created by combining two or more items from the questionnaire. Counter-derived variables were created by counting the number of persons with specific characteristics enumerated in the household. The linked-derived variable in the Household & Library file, STATE, was taken from the Genesys sample file used for the NHES:96 sample of telephone numbers. Linked-derived variables, created by using the respondent's ZIP Code to extract data from the 1990 Census of Population Summary Tape File 3B (STF3B), are available on a restricted-use file.

The derived variables appear together on the file in their own section in alphabetical order. They are listed below in the same order with an explanation of how they were derived. The SAS code to create these variables is located in appendix C, with the exception of counter variables, CENREG (Census region), and STATE.

ANYLIB is a derived variable that identifies whether any household member has used a public library for any purpose in the previous month. The variables used to create ANYLIB were LVISIT1, LVISIT2, LCOMP, LPHONE, LMATLS, and LMOBILE (question L2).

The values for ANYLIB are:

1 = Yes
2 = No

CENREG is a derived variable that identifies the Census region in which the household is located. This variable is created by grouping states. The following states and the District of Columbia are in each Census region:

Northeast: CT, MA, ME, NH, NJ, NY, PA, RI, VT
South: AL, AR, DC, DE, FL, GA, KY, LA, MD, MS, NC, OK, SC, TN, TX, VA, WV
Midwest: IA, IL, IN, KS, MI, MN, MO, ND, NE, OH, SD, WI
West: AK, AZ, CA, CO, HI, ID, MT, NM, NV, OR, UT, WA, WY

The values for CENREG are:

1 = Northeast
2 = South
3 = Midwest
4 = West

COMMUNTY is a derived variable representing the respondent's report of the size of the community in which the household is located. The variables used to create COMMUNTY were HHCOMMUN (SX31), HCCITY (SX31OV), and HCSUB (SX31OV2).

The values for COMMUNTY are:

1 = Very large city (over 500,000 people)
2 = Large city (100,000 to 500,000 people)
3 = Medium sized city (50,000 to 100,000 people)
4 = Suburb of a very large city
5 = Suburb of a large city
6 = Suburb of a medium city
7 = Small city or town of fewer than 50,000 people that is not a suburb of a larger city
8 = Rural or farming community

HH18OVER is the counter-derived variable that indicates the number of household members age 18 and older. The screener responses to HHAGE1 through HHAGE16 (S6) were examined for this variable.

HHTOTAL is the counter-derived variable that indicates the total number of household members. The screener responses to HHAGE1 through HHAGE16 (S6) were examined for this variable.

HHUNDR18 is the counter-derived variable that indicates the number of household members younger than 18 years old. The screener responses to HHAGE1 through HHAGE16 (S6) were examined for this variable.

HHUNDR21 is the counter-derived variable that indicates the number of household members younger than 21 years old. The screener responses to HHAGE1 through HHAGE16 (S6) were examined for this variable.

HIGHGRAD is the derived variable that indicates the highest level of education attained by the household member with the highest level of education. HIGHGRAD was created using the variables SGRADE(n) (SX9), GRADE(n) (SX13), and SDIPL(n) (SX14).

The values for HIGHGRAD are:

1 = Less than high school
2 = High school graduate or equivalent
3 = Vocational/technical education after high school or some college
4 = College graduate
5 = Graduate or professional school

STATE is a linked-derived variable that was taken from a Genesys sample file used for the NHES:96 sample of telephone numbers. States appear in the file as their 2-character postal designation.

6.1.7 Weighting and Variance Estimation Variables

The first variable in this section of the file is FHWT. It is the variable that should be used as the weight variable to estimate the characteristics of households. This weight contains all of the adjustments for the probabilities of selection, nonresponse, and undercoverage as described in Volume I, chapter 3.

The 80 replicate weights, FHWTR1 to FHWTR80, are the next variables in this section. These replicate weights can be used with the WesVarPC Windows-based software program procedure to produce estimates of the sampling errors of the estimates. More details on how the replicate weights were created and how they can be used with WesVarPC are given in Volume I, chapter 3, along with an approximation method that does not involve using the WesVarPC procedure.

The remaining two variables in this section are HSTRATUM and HPSU. These variables are provided to enable users to compute sampling errors using Taylor Series approximations, such as the SUDAAN procedure. The methods used to construct the values for HSTRATUM and HPSU are also discussed in Volume I, chapter 3.

6.1.8 Imputation Flag Variables

Item nonresponse occurred when some, but not all, of the responses were missing from an otherwise cooperating respondent. For all the items on the Household & Library public use file, the missing data were imputed, or "filled in," to help users of the data. For each variable involved in imputation, an imputation flag variable was created. If the imputation flag is equal to 0, then no imputation was performed on that case. This flag can be used to identify imputed values. Volume I, section 3.8 discusses the meaning of values assigned to the imputation flags.

The naming convention for the imputation flag variables was to drop the last letter of the variable name and replace it with an "f." For example, the imputation flag for HWIC (SX32) is HWIF. This naming convention holds true for all Household & Library variables except for variables that originally end in "f," variables that will become confused with other variables when the last letter is dropped, or variables that end in a number. In these cases, the letter before the last letter or last digit is dropped and replaced with an "f." For example, the imputation flag for SEX1 is SEF1. The imputation flags appear on the file in the same order as the items.

6.1.9 Numeric and Character Variables

All of the variables in the Household & Library file have numeric formats except SCRNRSLT, the variables that indicate the grade a person is attending or the grade equivalent, SGRADE1 through SGRADE16 (SX9), SGRDEQ1 through SGRDEQ16 (SX10), and STATE.

6.2 Guide to the Codebook

The codebook, shown in appendix D, contains complete descriptions of the contents of the data file. The codebook contains system variables, household member summary variables, public library use variables, household characteristics variables, household membership variables, derived variables, weighting and variance estimation variables, and imputation flag variables. The codebook provides all the pertinent information for the variables in the file, including the variable name, the question wording, the position and format of the variable in the file, and the responses to the item. The unweighted frequency, unweighted percent, and weighted percent are provided along with each response. Figure 6-1 provides a description of each of the items appearing in the codebook.

6.3 Public and Proprietary Data Files

This manual is designed to assist users of the public use Household & Library data file. The public use file contains all the variables detailed above but does not contain certain variables excluded from the file for confidentiality reasons. These include the names of household members, verbatim string responses that might identify persons, and respondents' individual ZIP Codes (HZIPCODE). Some of these variables (e.g., verbatim strings of other-specify categories, HZIPCODE) that are excluded from the public file are included on a separate proprietary, or restricted-use, file. These variables are indicated with a "/R" on the Screener/Household & Library questionnaire in Volume I, appendix A. The proprietary data file also contains close to 100 "ZIP code" variables from the 1990 Census of Population Summary Tape File 3B (STF3B), including the median household income of the area, the level of community mobility in the area, and the percentage of owner-occupied households in the area. The proprietary data file may be obtained through a special licensing agreement with NCES. Contact NCES for details on how to become licensed.

6.4 Linking the Household & Library File to Other NHES:96 Data Files

It is possible to link the Household & Library file to the Parent PFI/CI, the Youth CI, and the Adult CI data files. Instructions for doing so are located in appendix E.

Figure 6-1.—Example of the codebook format

(1) XHHLANG = (2) SX18-ALL IN HH LEARN ENGL/1ST LANG
(3) SX18 (Did you/Did every member of your household) learn English as (your/their) first language?

(4) RECORD: 1 POSITION: 23-24
(5) FORMAT: N2

(6) RESPONSE	(7) CODES	(8) FREQ	(9) UNWGTD PERCENT	(10) WGTD PERCENT
1 YES	1	46914	84.2%	97.7%
2 NO	2	1396	2.5%	2.3%
RESERVED CODES:				
-1 INAPPLICABLE	-1	7398	13.3%	(MISS)
TOTALS		55708	100.0%	100.0%

DESCRIPTIONS:

(1) Variable name: This is the variable name associated with each item. This is the unique identifier present in the SAS or SPSS data file.

(2) Variable label: A short label, which is associated with each of the variables, is presented here. This label appears in the SAS or SPSS data file. Labels contain the questionnaire item numbers. Labels that begin with the letter "D" indicate a derived variable.

(3) Question wording: This is the exact question wording as it appeared in the questionnaire.

(4) Record and position: These provide the record number (1, 2 or 3) and the starting and ending position of the variable in the raw data file on tape.

(5) Format: This provides the variable type, its width, and the number of positions after the decimal point, if necessary. A data type of "N" represents numeric variables and "A" represents character variables. In this example, XHHLANG is a numeric variable with a length of 2.

(6) Response categories: This column provides the response categories for the variable.

(7) Response codes: This column provides the actual numeric/alphanumeric codes present in the data files.

(8) Unweighted frequency counts: This column displays the unweighted frequency counts for this variable. The counts for missing values will also be included for the unweighted values, but not for the weighted values.

(9) Unweighted percentages: This column displays the unweighted frequency counts from the previous column as percentages. This column will also contain percentages for missing values.

(10) Weighted percentages: This column displays the percentages of frequency counts weighted up to the population. This column will not include percentages for missing values.

7. DATA CONSIDERATIONS AND ANOMALIES

The purpose of this section is to bring to the user's attention certain data considerations and data anomalies in the NHES:96 Household & Library data; to describe the nature of those anomalies; and, where appropriate, to identify possible means of taking them into account when analyzing the Household & Library data. Only three data considerations that users should aware of have been identified in the Household & Library data file.

7.1 Type of Community in Which the Household is Located

The NHES:96 Household & Library file includes a measure of the urbanicity of the sampled household, COMMUNTY. The creation of the derived variable COMMUNTY was described in chapter 6. The item response rates for the variables used to create COMMUNTY were somewhat lower than most variables in the NHES. HCCOMMUN (SX31, the type of community) had an item response rate of 92.5 percent; HCSUB (SX31OV, size of city to which a suburb belonged, if applicable) had an item response rate of 93.1 percent; and HCCITY (SX31OV2, size of the city, if applicable) had an item response rate of 95.7 percent. When these three variable were combined to create the derived variable COMMUNTY, 47,490 of the 55,708 households (85.3 percent) had unimputed responses for all three variables. Some respondents simply do not know the size of the community in which they live. This suggests the possibility that some who responded to the questions may have guessed, although this cannot be measured directly. Analysts should keep this in mind when using variable COMMUNTY, as this variable may contain response error.

7.2 Correspondence Between Age and Grade

In any survey in which information on people's ages and grades in school (or grade equivalents), some cases appear in which age and grade do not seem to correspond to one another. This is true of each year of the NHES, the CPS October Educational Supplement, and other surveys. In many cases in the NHES, the situations, behind these discrepancies are unclear -- it is only known that a CATI edit was tripped and the interviewer had to confirm the information and enter it again. In some cases, interviewers provide more complete explanations. For example, a person may be in a grade far lower than his/her age would indicate, but may be mentally retarded and in a special education program with a low grade equivalent. Some adults long past the modal age of high school completion may report a secondary grade because they are enrolled in adult nighttime high school. For example, some adults have an elementary or secondary grade or grade equivalent in the variables SGRADE1 or SGRDEQ1. Analysts may wish to examine these unusual cases and make their own decisions about how to treat these cases in their analyses.

7.3 Income to the Nearest Thousand Dollars

In those households whose income category and household size indicated that they may be at or below the poverty line, respondents were asked to report their household income to the nearest thousand dollars. As the values in the data file show, some respondents did not answer in thousands, but gave somewhat more specific answers. Rather than lose this information, the exact response was retained.

NOTE: The variable RECNUM is located in the last column of each record (column 1024). The value of RECNUM varies with the record number of a given case. RECNUM is set to one on the first record of every case, 2 for the second record, and 3 for the third record. Each case on the Household & Library data set has three records of data.

APPENDIX D
HOUSEHOLD & LIBRARY CODEBOOK

HOUSEHOLD & LIBRARY CODEBOOK

This section of the manual contains the codebook for the NHES:96 Household & Library data file. Prior to using the codebook and data file, readers should review chapter 6, Guide to the Data File and Codebook, and chapter 7, Data Considerations and Anomalies. Both of those chapters provide information that will make it easier for analysts to understand the layout of the data file and the variables that have been included.

For each data element, the question, variable label, file location, format, codes, value labels, frequency, unweighted percents, and weighted percents are presented. Readers should review figure 6-1 on page 11 and the accompanying text for a detailed description of the codebook entries. As the reader will see in reviewing that section, standard formats have been used, and the same inapplicable code (-1) is used for all variables.

The data file contains several types of variables that are useful for analytical and methodological applications. The list below indicates the types of variables, the page of the text on which a discussion of the variable type begins, and the codebook pages on which the variables can be found.

Variable set	**Text Discussion**	**Codebook pages**
System variables (includes ID)	Ch. 6, pp. 3	D-3
Household member summary	Ch. 6, pp. 4	D-3 to D-4
Public library use	Ch. 6, pp. 5	D-4 to D-7
Household characteristics	Ch. 6, pp. 5	D-7 to D-9
Household membership	Ch. 6, pp. 5	D-9 to D-75
Derived variables	Ch. 6, pp. 7	D-75 to D-77
Weights, HPSU, and HSTRATUM	Ch. 6, pp. 9	D-77 to D-86
Imputation flags	Ch. 6, pp. 9	D-86 to D-128

In every survey, there are some apparent anomalies in the data. Such anomalies may occur because of reporting or recording error, but may also occur because respondents may report rare situations not normally anticipated. Chapter 7 of the text describes some real and apparent anomalies in the NHES:96 Household & Library data, as well as some data considerations that could be important for some analyses. Data users wishing to better understand the Household & Library data should review chapter 7.

APPENDIX E

DIRECTIONS AND CODE FOR LINKING DATA FILES

Linking the NHES:96 Data Files

It is possible to link information from the four distinct NHES:96 files. This process is clear once the structure of the file identifiers is understood. First, the types of identifiers found on the NHES:96 data files are discussed. In the NHES:96, there are **household** identification numbers (**BASEID**), interview **subject** identification numbers (**ENUMID**), and **interview** or case identification numbers (**BASMID**). In addition, two-digit **person numbers** are provided for household members within households. The household, interview, and subject identification numbers are first discussed and then the person numbers.

- **BASEID**, is the **household** identification number. This eight-digit identification number is the same for every data record within a household and is the case identification number for the Household & Library data file. It is also provided on the Parent PFI/CI file, the Youth CI file, and the Adult CI file to permit data users to form linkages between the files.

- **ENUMID** is the **interview subject** identification number and is composed of 10 digits. "Interview subject" identification,means that this number is unique to the person who is the subject of the interview. For example, in the Parent PFI/CI data file, **ENUMID** is the ID number of the child or youth who is the *subject* of the interview. Thus, **ENUMID** is the same in the Parent PFI/CI interview about a given youth and in that youth's own Youth CI interview record. **ENUMID** appears in the Parent PFI/CI and Youth CI data files only.

- **BASMID** is the unique **interview** or case identification number and is composed of 12 digits. Each Parent PFI/CI, Youth CI, or Adult CI interview has this unique interview ID. The first eight digits of **BASMID** are the same as **BASEID** for the household to which the interview belongs. The first 10 digits of **BASMID** are the same as the **ENUMID** of the subject of the interview. Therefore, a Parent PFI/CI interview record and a Youth CI record about the same youth would have the same value for **ENUMID**, but each interview would have its own unique **BASMID**. For the Parent PFI/CI interview, the last two digits are 01; for the Youth CI interview, the last two digits are 02; and for the Adult CI interview, the last two digits are 03. **BASMID** is the variable specified as the case identification number when creating a WesVarPC analysis from the Parent PFI/CI, Youth CI, or Adult CI files (see chapter 3 of this volume for a discussion of variance estimation and WesVarPC.)

Two-digit person identification numbers are provided on each of the NHES:96 data files in order to permit data users to copy information about certain individuals across interview records. In developing the public use data files, care was taken to include those person-level variables that were most likely to be needed by analysts. For example, the educational attainment of and languages spoken by the child's parents are included on the Parent PFI/CI file, since these parent characteristics are likely to be of interest to many analysts. These characteristics of subject adults are also included on the Adult CI file. In addition, since household characteristics (such as own/rent and income) are likely to be of interest to many analysts, these variables are contained on all four of the NHES:96 data sets and it is not necessary to copy them from the Household & Library file to the Parent PFI/CI, Youth CI, or Adult CI data files.

However, there may be circumstances in which an analyst would like to copy data items about a household member from one file to another. In order to facilitate linkages between the NHES:96

data files for the purpose of merging person characteristics, individual person numbers are provided on the data files. These two-digit numbers represent the number assigned to the person during enumeration of the household, i.e., 01 for the first person listed by the Screener respondent, 02 for the second person, etc.

- **PNUM(*n*)** is the two-digit person number variable in the Household & Library file. As noted above, many individual characteristics appear on this file for each household member, and these characteristics have sequential numbers, e.g., AGE1, AGE2, AGE3, and so on. Similarly, **PNUM**(*n*) carries the same sequential numbers in the variable name, so that it appears as PNUM1, PNUM2, PNUM3, etc. PNUM(*n*) contains the number assigned to each household member at the time of enumeration.

  NOTE: *The value of PNUM(n) is not the same as the sequential number it carries in its variable name*. That is, PNUM1 is not necessarily equal to "01," PNUM2 is not always equal to "02," etc. There are two reasons for this. First, during data collection and data preparation, household members who were originally enumerated may have been deleted because they were later determined not to be household members according to the study definition. The enumeration numbers assigned to the household members were not changed when this occurred, because doing so would have disrupted linkages between segments in the hierarchical CATI data base. Second, after imputation of person-level records, the household members were sorted by age, oldest to youngest, before constructing the rectangular Household & Library file.

- In the Parent PFI/CI and Youth CI data files, four two-digit person numbers are provided -- **MOMNUM** for the child's mother (if any), **DADNUM** for the child's father (if any), **RESPNUM**, the person number of the respondent to the Parent PFI/CI interview, and **CHILDNUM** for the subject child or youth. If the mother or the father was the respondent to the Parent PFI/CI interview, MOMNUM (or DADNUM) will have the same value as RESPNUM.

- In the Adult CI data file, the person number for the sampled adult is contained in **PERSNUM**.

In order to effectively approach linkages between NHES:96 data files, it is important to remember the structure of the NHES:96 sample. Every household with a completed Screener interview has a household record in the Household & Library file. Therefore, every Parent PFI/CI, Youth CI, and Adult CI data record belongs to a household that is also represented in the Household & Library file. Because the Youth CI interview was only attempted if the corresponding Parent PFI/CI interview was completed, every Youth CI interview has a corresponding Parent PFI/CI record. As noted earlier, the sample of telephone numbers for the NHES:96 was split, and 95 percent was assigned to Parent/Youth interviewing and 5 percent was assigned to Adult CI interviewing. As a result, there are no Parent PFI/CI or Youth CI interviews for which there is an Adult CI interview in the same household.

The following examples are provided for the general populations for each component. Data users should consider the following tips regarding the length of time required to run a program and use of disk space:

- The data files are provided in ID order -- all of the following examples present code for sorting data files prior to linking (merging). Sorting the files can take up considerable time and disk space. If the files are already in the order required by the analyst, sorting is unnecessary.

- Keep only the variables required for your analysis -- specifying only the variables needed for the analysis will significantly improve the speed of the linking and the created data file will use less disk space. The use of a KEEP option, demonstrated in some of the following examples, can be used for this purpose.

- Keep only the relevant records -- when linking, for example, the Parent PFI/CI file with the Household & Library file, a match for every parent can be found that will bring together the Parent PFI/CI variables with the parents' related Household & Library variables. However, there are additional records in the Household & Library file unrelated to the Parent PFI/CI file, i.e., household information on respondents found in the Adult CI and Youth CI files. The example on **Linking between Parent PFI/CI and Youth CI files** demonstrates a technique for dropping unwanted records resulting from such a merge; in the SAS example note the use of the ONPARENT variable and in the SPSS examples the INPARENT recode.

Linking between Parent PFI/CI and Youth CI files is straightforward. The common identifier (key) is the ENUMID, and is available on both files. Sample SAS code to bring together these two files follows:

```
DATA TEMP;
MERGE parent_filename (IN=ONPARENT) youth_filename (IN=ONYOUTH);
BY ENUMID;
RUN;

Sample SPSS for DOS code is:

SET MORE = OFF

GET FILE = 'youth file'.
SORT CASES BY ENUMID.
SAVE OUTFILE = 'temp'.

GET FILE = 'parent file'.
SORT CASES BY ENUMID.

JOIN MATCH FILE = */FILE = 'temp'
   /BY ENUMID
   /MAP.
SAVE OUTFILE = 'merged file'.
```

Sample SPSS for Windows code is:

```
GET FILE = 'youth file'.
   /KEEP = ALL.
SORT CASES BY ENUMID.
SAVE OUTFILE = 'temp'.

GET FILE = 'parent file'.
   /KEEP = ALL.
SORT CASES BY ENUMID.

MATCH FILES FILE = */FILE = temp
   /BY ENUMID
   /MAP.
SAVE OUTFILE = 'merged file'.
```

Linking between the Household & Library file and the Parent PFI/CI, Youth CI, or Adult CI files requires using the key common to both files. This is accomplished using BASEID, which appears on all data files. The following example shows how to join selected library items from the Household & Library file with the Parent PFI/CI file and retain only records from the Parent PFI/CI file. Similarly, the Youth CI or Adult CI file can be substituted where references to the Parent PFI/CI file are made to allow joining library items with that file. Example SAS code to bring these files together follows:

```
DATA TEMP;
MERGE parent_filename (IN=ONPARENT) household_and_library_filename (KEEP = BASEID LCOMP LCONSUME
LDISTANC LJOBHELP);
BY BASEID;
IF ONPARENT;
RUN;
```

Sample SPSS for DOS code is:

```
SET MORE = OFF

GET FILE = 'household & library file'
   /KEEP = BASEID LCOMP LCONSUME LDISTANC LJOBHELP.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp'.

GET FILE = 'parent file'.
COMPUTE INPARENT = 1.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp2'.

JOIN MATCH TABLE='temp'
   /FILE='temp2'
   /BY BASEID
   /MAP.

SELECT IF (INPARENT = 1).
SAVE OUTFILE = 'merged file'.
```

Sample SPSS for Windows code is:

```
GET FILE = 'household & library file'
   /KEEP = BASEID LCOMP LCONSUME LDISTANC LJOBHELP.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp'.

GET FILE = 'parent file'
   /KEEP = ALL.
COMPUTE INPARENT = 1.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp2'.

MATCH FILES TABLE ='temp'
   /FILE='temp2'
   /BY BASEID
   /MAP.

SELECT IF (INPARENT = 1).
SAVE OUTFILE = 'merged file'.
```

Linking between selected household member characteristics and the Parent PFI/CI file requires the use of household member person numbers. (The same approach can be used to link person-level variables in the Household & Library file with the Youth CI and Adult CI data files.) As noted above, the household member person numbers on the Parent PFI/CI file are stored in the variables CHILDNUM, MOMNUM, DADNUM, and RESPNUM. On the Household & Library file, the characteristics of household members have been stored in arrayed fields that number from 1 to 16, for example **MARITL1-MARITL16** gives the marital status of each household member. Household member numbers have been stored in the fields **PNUM1-PNUM16** on the **Household & Library** file. To determine the marital status of the child's father, each **PNUM(*n*)** field must be compared to the value of the **DADNUM** field and the corresponding arrayed **MARITL(*n*)** field contains the father's marital status, for example, if **DADNUM** equals the value in **PNUM5**, then the **MARITL5** field contains the father's marital status. Building on the preceding code, the following code demonstrates a way this can be accomplished in SAS. Note that characteristics can be determined for the child, mother, or interview respondent by substituting CHILDNUM, MOMNUM, or RESPNUM for references to DADNUM in the following code.

```
DATA TEMP;
MERGE parent_filename (IN=INPARENT) household_and_library_filename (KEEP = BASEID PNUM1-PNUM16
MARITL1-MARITL16);
BY BASEID;
IF INPARENT;
/* determine which element contains dads info and assign dads marital status to DADSMAR */
IF DADNUM = PNUM1 THEN DADSMAR = MARITL1;
ELSE IF DADNUM = PNUM2 THEN DADSMAR = MARITL2;
ELSE IF DADNUM = PNUM3 THEN DADSMAR = MARITL3;
ELSE IF DADNUM = PNUM4 THEN DADSMAR = MARITL4;
ELSE IF DADNUM = PNUM5 THEN DADSMAR = MARITL5;
ELSE IF DADNUM = PNUM6 THEN DADSMAR = MARITL6;
ELSE IF DADNUM = PNUM7 THEN DADSMAR = MARITL7;
ELSE IF DADNUM = PNUM8 THEN DADSMAR = MARITL8;
ELSE IF DADNUM = PNUM9 THEN DADSMAR = MARITL9;
ELSE IF DADNUM = PNUM10 THEN DADSMAR = MARITL10;
ELSE IF DADNUM = PNUM11 THEN DADSMAR = MARITL11;
ELSE IF DADNUM = PNUM12 THEN DADSMAR = MARITL12;
ELSE IF DADNUM = PNUM13 THEN DADSMAR = MARITL13;
ELSE IF DADNUM = PNUM14 THEN DADSMAR = MARITL14;
ELSE IF DADNUM = PNUM15 THEN DADSMAR = MARITL15;
ELSE IF DADNUM = PNUM16 THEN DADSMAR = MARITL16;
RUN;
```

Sample SPSS for DOS code is:

```
SET MORE = OFF
GET FILE = 'household & library file'
   /KEEP = BASEID PNUM1 TO PNUM16 MARITL1 TO MARITL16.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp'.

GET FILE = 'parent file'.
COMPUTE INPARENT = 1.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp2'.

JOIN MATCH TABLE='temp'
   /FILE='temp2'
   /BY BASEID
   /MAP.
SELECT IF (INPARENT = 1).

IF (DADNUM = PNUM1)  DADSMAR = MARITL1.
IF (DADNUM = PNUM2)  DADSMAR = MARITL2.
IF (DADNUM = PNUM3)  DADSMAR = MARITL3.
IF (DADNUM = PNUM4)  DADSMAR = MARITL4.
IF (DADNUM = PNUM5)  DADSMAR = MARITL5.
IF (DADNUM = PNUM6)  DADSMAR = MARITL6.
IF (DADNUM = PNUM7)  DADSMAR = MARITL7.
IF (DADNUM = PNUM8)  DADSMAR = MARITL8.
IF (DADNUM = PNUM9)  DADSMAR = MARITL9.
IF (DADNUM = PNUM10) DADSMAR = MARITL10.
IF (DADNUM = PNUM11) DADSMAR = MARITL11.
IF (DADNUM = PNUM12) DADSMAR = MARITL12.
IF (DADNUM = PNUM13) DADSMAR = MARITL13.
IF (DADNUM = PNUM14) DADSMAR = MARITL14.
IF (DADNUM = PNUM15) DADSMAR = MARITL15.
IF (DADNUM = PNUM16) DADSMAR = MARITL16.

SAVE OUTFILE = 'merged file'.
```

Sample SPSS for Windows code is:

```
GET FILE = 'household & library file'
   /KEEP = BASEID PNUM1 TO PNUM16 MARITL1 TO MARITL16.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp'.

GET FILE = 'parent file'
   /KEEP = ALL.
COMPUTE INPARENT = 1.
SORT CASES BY BASEID.
SAVE OUTFILE = 'temp2'.
MATCH FILES TABLE ='temp'
   /FILE='temp2'
   /BY BASEID
   /MAP.
SELECT IF (INPARENT = 1).

IF (DADNUM = PNUM1)  DADSMAR = MARITL1.
IF (DADNUM = PNUM2)  DADSMAR = MARITL2.
IF (DADNUM = PNUM3)  DADSMAR = MARITL3.
IF (DADNUM = PNUM4)  DADSMAR = MARITL4.
IF (DADNUM = PNUM5)  DADSMAR = MARITL5.
IF (DADNUM = PNUM6)  DADSMAR = MARITL6.
IF (DADNUM = PNUM7)  DADSMAR = MARITL7.
IF (DADNUM = PNUM8)  DADSMAR = MARITL8.
IF (DADNUM = PNUM9)  DADSMAR = MARITL9.
